# Problem Sets

- Problem Set 1 is now due.
- Problem Set 2 is due next Tuesday, February 14, by 12:29PM PT.
- You should not use any R packages or functionalities beyond what is already included in “base” R, unless a package is explicitly mentioned (i.e. `ggplot2` for this problem set).
- Code efficiency and elegance will not be key factors in grading, with limited exceptions...
  - if code is so disorganized it is difficult for teaching staff to understand it
  - if code is so inefficient that it is essentially implementing manual processes

To RStudio!
