Section in 30ish Seconds

- ▶ `ps132b::makeFriendFunction(num=3)`
- ▶ Space for Questions from the week
- ▶ R Practice
- ▶ Teach some other friends

Make Friends

Make three friends (e.g. groups of no less than 3).

I'm not here to tell you how to live your life, but you might consider making at least one new friend that you didn't make last week

Space for Questions from the week

Within reason, the floor is open for any questions

R Activity 1: How might we assign groups?

To R!

R Activity 2: Data Practice

1. Come up with a problem domain you find interesting. What are you interested in predicting within this domain?
2. Discuss what data you would want to have if you were Oski the Bear (or some other being of unimaginable power)
3. Build out that data frame with at least 6 data points in each variable. Use different types of variables. Every single person in your group should individually type out their own R script!
4. Discuss how you might use your magical data to predict your outcome of interest
5. Find another person(s) who you haven't met before. Exchange thoughts.
